

Using Siemens NX 11 Software

Assembly example - Stirling engine

The *Assembly* module will be used.

Assemble the parts you designed during session 3 as shown here below. A nomenclature of the parts is available in the pages of session 3.

If you did not manage to design all the pieces during session 3, you can find all of them in the folder C:\Commun\NX\Stirling.

The figure below shows the configuration of the parts in space.
